User Manual: Deal Radar

Deal Radar turns any owner list (Active Farm, Forever Farm, PropertyRadar, county or title exports, skip-trace files) into a ranked call list in seconds. It separates owners under real pressure from owners worth a listing conversation, lets you track every call, and learns which signals actually convert in **your** farm. Every grade comes from fixed, auditable rules, not guesswork.

1. Quick Start

1. **Drop your CSV** into the dashed upload box (or click it to browse). You can drop several files at once; a skip-trace file is merged into the property file automatically.
2. **Read the summary** card: how many owners are distress-verified leads and how many belong in your farm.
3. **Pick a view**: `Leads`, `Farm` or `Everything`.
4. **Work the list**: set a Status on each owner you call, click the owner's name to add a note and a callback date.
5. **Export** when you need a file for your CRM, dialer or team.

> **Your data stays with you.** Lists are processed in your browser and saved only on your computer. Nothing is uploaded to or stored on our servers.

2. The Three Views

View	What you see	Use it for
Leads	Only owners with verified distress (tax arrears of 2+ years, NOD / NTS, death, divorce, vacancy) that hasn't been resolved by a later sale. Sorted by distress first.	Motivated-seller calls. These owners have a reason to move now.
Farm	No distress at all, but at least one of: absentee owner or long-term hold (13+ years). Any owner with distress is a Lead, never Farm. Sorted by years held, then equity.	Listing conversations, mailers, door-knocking. Not discount offers.
Everything	The full file, including rows filtered out (government, banks / HOAs / churches, duplicates, no signal).	Checking what was excluded and why, or exporting the complete graded file.

> **Tip:** *The tool opens on the view that has data. A farm-only file (no distress columns) lands on Farm automatically, and the banner above the summary tells you which columns were missing.*

Lead tiers (Leads view)

Tier	Meaning
Verified — call now	Distress verified and a phone whose area code fits the property's state.
Verified — phone unverified	Distress verified, phone on file but not confirmed for the area.
Verified — no phone on file	Distress verified, needs skip-tracing or mail.
Verified — no contact info	Distress verified, but no phone or mailing address in the file. Shown last; needs a skip-trace.

Match dots

Each owner is checked against three core signals: **Distress**, **Long-term hold (13+ yrs)** and **Absentee**. ●●● = all three, ●●○ = two, ●○○ = one. Click the owner's name to see exactly which signals fired and the score reasons.

3. Working a Lead: Status, Notes, Callbacks

Use the **Status** dropdown on any row. Click the **owner's name ▸** to open the detail panel with Notes and a Callback date. **There is no Save button.** Every change saves instantly on your computer, stamped with the date and your name.

Status	Counts as	When to use
New	Not worked	Default. Not called yet.
Attempted	Worked	Called, no answer / voicemail.
Contacted	Reached	Spoke with the owner.
Interested · Appointment · Under Contract · Closed	Reached + Positive	The conversation is moving forward.
Not Interested · DNC	Reached	Spoke, not selling / do not call.
Bad Number	Bad #	Wrong or disconnected number.
Dead	Worked	No longer pursuing.

A callback date shows as ↻ **date** under the Status, so you can scan the list for who's due.

> **Tip:** *Statuses are tied to the property (APN or address), not to the file. Reopen a list, re-upload it, or load another file containing the same property, and your status and notes come back.*

4. Saved Lists

Every list you load is saved automatically on your computer (you'll see ✓ **Saved to this computer**). The **Saved lists** panel under the upload box shows your last 10 lists with row count and date.

Action	What it does
● Showing	The list currently on screen.
Open	Reloads that list with identical grades and your statuses attached.
Rename	Give it a friendly name, e.g. "Union City absentee — Nov".
Delete / Clear all	Removes saved lists from this computer. Your statuses and notes are kept.

5. Exports

Button	What you get	Best for
⬇ Download Scored CSV	Every row in the **current view** with all columns plus Status, Notes, Callback. Named after your list, view and date.	A full working copy; switch to Everything first for the whole file.
📦 Export Lead Package	A clean, dialer-ready file of workable owners in the current view (filtered rows removed): up to 3 phones, email, mailing address, tier, signals, urgency and your status.	Mojo, REISift, BatchDialer or any CRM import.
⬇ Export dispositions ⬆ Import dispositions	Inside Outcomes: a small file of only your statuses, notes and callbacks.	Backing up your call log, or moving it to another computer or teammate.

> **Tip:** *If a view is empty, you'll see "Nothing to export in this view". Switch to Farm or Everything.*

6. Outcomes: What's Actually Converting

Click 📈 Outcomes. Any owner with a status other than New counts as **worked**. Once you've worked **10 or more**, a table shows, for each signal (e.g. Absentee, Out-of-state owner, Tax delinquent):

Column	Meaning
Worked	How many owners with this signal you've dispositioned.
Reached	% where you actually spoke with the owner.
Positive	% that became Interested, Appointment, Under Contract or Closed.
Bad #	Count of bad numbers. Tells you which data source to trust.

> **Tip:** *This is your market's real answer, not a vendor's claim. After a few weeks, spend your calling time on the signals with the highest Positive rate.*

7. Good to Know

Question	Answer
Where is the database?	There isn't one, by design. Your lists and call log live only in your browser on your computer.
Will my work show on another computer?	No. Use Export dispositions / Import dispositions, or Download Scored CSV.
What erases saved work?	Clearing your browser's site data. Export regularly if your log matters.
Why no leads in my file?	The file has no distress columns. Add the county / title export with Tax Delinquent and NOD.
